## INOVANCE

## User Guide

MD500 Series AC Drive

## Preface

Thank you for purchasing the MD500 Series AC Drive developed by Inovance.
As a general-purpose and high-performance current vector AC drive, it is mainly used for controlling and adjusting the speed and torque of three-phase AC asynchronous motors. Using high-performance vector control technology, the MD500 series AC drive features high torque output at a low speed, excellent dynamic characteristics, and superior overload capability. It provides user-programmable features and monitoring software, and communication bus functions and supports multiple encoder types, delivering rich and powerful combined functions and stable performance. It can be used to drive automatic manufacturing equipment in the fields of textile, papermaking, drawing, machine tools, packaging, food, fans, and water pumps.

Product appearance

## - First use

Read this user guide carefully if you use the product for the first time. For any doubt on its function or performance, contact our technicians for help.

## - Standards compliance

The following table lists the certificates and standards that the product may comply with. For details about the acquired certificates, see the certification marks on the product nameplate.

| Name | Directive Name |  | Standard |  |
| :---: | :--- | :---: | :---: | :---: |
|  | EMC Directive | $2014 / 30 / E U$ | EN 61800-3 |  |
|  | LVD Directive | $2014 / 35 / E U$ | EN 61800-5-1 |  |
|  | RoHS Directive | $2011 / 65 / E U$ | EN 50581 |  |
| TUV certification | EN 61800-5-1 |  |  |  |
|  |  | UL61800-5-1 |  |  |
|  |  | C22.2 No.14-13 |  |  |

Appllicant Suzhou Inovance Technology Co., Ltd.
AC Drive
Model MD500 series
Made In China
Manufacturer
A 급기기 (업무용 방송통신기자재)
이 기기는 업무용(A 급) 전자파적합기기로서 판매자
또는 사용자는 이 점을 주의하시기 바라며,가정외의
지역에서 사용하는 것을 목적으로 합니다.

- Adjusting Drive Parameters

The drive when it leaves the factory with default settings should enable the user toget started quickly to check on the basic mechanical running conditions. At a later time,fine tuning to optimize the operation/performance can be undertaken.

Such parameter tuning should be done by qualified personnel who have prior trainingon Servo Drives. Some parameter settings can have adverse reactions if manipulated incorrectly and care should be taken especially during the commissioning startup stages to prevent personnel from engaging the machine.

This manual provides a complete list of the parameters with functional description and care should always be taken whenever parameters are adjusted during a live running startup. Inovance Technology and Authorized Distributors can provide product training and if in doubt seek advice.

## Revision History

| Date | Version | Revision Description |
| :---: | :---: | :---: |
| November 2015 | V0.0 | First release. <br> Related firmware version: F7-10 $=\mathrm{U} 76.56$ and $\mathrm{F} 7-11=\mathrm{U} 77.56$ |
| April 2016 | A01 | Related firmware version: F7-10 $=\mathrm{U} 76.56$ and F7-11 $=\mathrm{U} 77.56$ |
| November 2016 | A02 | Modified "Approvals", the designation rule and nameplate. |
| November 2017 | A03 | - Added 0.4 to 15 kW models. <br> - Deleted the MDKE7 operating panel and added the MDKE9 operating panel. |
| May 2019 | A04 | - Changed the document structure. <br> - Added information of three-phase 200 to 240 V models in the following sections: <br> 1.1 Nameplate and Ordering Code <br> 1.3 Technical Specifications <br> 1.4 Product Dimensions <br> 2.4 Selection of Cables, Breakers and Contactors <br> 2.5 Selection of AC Output Reactors <br> 2.6 Selection of Braking Components <br> 3.1.2 Backplate Mounting and Through Hole Mounting <br> (Note: Three-phase 200 to 240 V models indicates MD500- <br> 2T0.4GB to MD500-2T55GB.) <br> Added specifications of cables that comply with the UL certification in "Selection of Cables, Breakers and Contactors". <br> - Added the selection table of braking components in "2.6 Selection of Braking Components". <br> Updated Inovance's logo. <br> - Modified the setting range of F3-00 and F3-01 and the default value of F7-04 in "Appendix A Parameter Table". |

## - Acquisition

This user guide is shipped with the product. For any additional order, contact your sales representative.

This user guide briefly introduces product information, installation and wiring, troubleshooting, and routine maintenance. For more details, see 19010355 MD500 Series AC Drive Advanced User Guide.

To obtain the user guide, access Inovance's website (http://www.inovance.com), click Download, search for the user guide by its name, and then download the PDF file.

## Safety Instructions

## Safety Precautions

1) Before installing, using, and maintaining this equipment, read the safety information and precautions thoroughly, and comply with them during operations.
2) To ensure the safety of humans and equipment, follow the signs on the equipment and all the safety instructions in this user guide.
3) "CAUTION", "WARNING", and "DANGER" items in the user guide do not indicate all safety precautions that need to be followed; instead, they just supplement the safety precautions.
4) Use this equipment according to the designated environment requirements. Damage caused by improper usage is not covered by warranty.
5) Inovance shall take no responsibility for any personal injuries or property damage caused by improper usage.

## Safety Levels and Definitions

indicates that failure to comply with the notice will result in severe personal injuries or even death.

indicates that failure to comply with the notice may result in severe personal injuries or even death.
indicates that failure to comply with the notice may result in minor personal injuries or damage to the equipment.

## Safety Instructions

## Unpacking

## CAUTION

- Check whether the packing is intact and whether there is damage, water seepage, damp, and deformation.
- Unpack the package by following the package sequence. Do not hit the package with force.
- Check whether there are damage, rust, or injuries on the surface of the equipment or equipment accessories.
- Check whether the number of packing materials is consistent with the packing list.

## WARNING

- Do not install the equipment if you find damage, rust, or indications of use on the equipment or accessories.
- Do not install the equipment if you find water seepage, component missing or damage upon unpacking.
- Do not install the equipment if you find the packing list does not conform to the equipment you received.

## Storage and Transportation

## CAUTION

- Store and transport this equipment based on the storage and transportation requirements for humidity and temperature.
- Avoid transporting the equipment in environments such as water splashing, rain, direct sunlight, strong electric field, strong magnetic field, and strong vibration.
- Avoid storing this equipment for more than three months. Long-term storage requires stricter protection and necessary inspections.
- Pack the equipment strictly before transportation. Use a sealed box for long-distance transportation.
- Never transport this equipment with other equipment or materials that may harm or have negative impacts on this equipment.

## WARNING

- Use professional loading and unloading equipment to carry large-scale or heavy equipment.
- When carrying this equipment with bare hands, hold the equipment casing firmly with care to prevent parts falling. Failure to comply may result in personal injuries.
- Handle the equipment with care during transportation and mind your step to prevent personal injuries or equipment damage.
- Never stand or stay below the equipment when the equipment is lifted by hoisting equipment.

## Installation

## WARNING

- Thoroughly read the safety instructions and user guide before installation.
- Do not modify this equipment.
- Do not rotate the equipment components or loosen fixed bolts (especially those marked in red) on equipment components.
- Do not install this equipment in places with strong electric or magnetic fields.
- When this equipment is installed in a cabinet or final equipment, protection measures such as a fireproof enclosure, electrical enclosure, or mechanical enclosure must be provided. The IP rating must meet IEC standards and local laws and regulations.

## DANGER

Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed by only professionals.

- Installation, wiring, maintenance, inspection, or parts replacement must be performed by only experienced personnel who have been trained with necessary electrical information.
- Installation personnel must be familiar with equipment installation requirements and relevant technical materials.
- Before installing equipment with strong electromagnetic interference, such as a transformer, install an electromagnetic shielding device for this equipment to prevent malfunctions.

Wiring

## DANGER

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed by only professionals.
- Never perform wiring at power-on. Failure to comply will result in an electric shock.
- Before wiring, cut off all equipment power supplies. Wait at least 10 minutes before further operations because residual voltage exists after power-off.
- Make sure that the equipment is well grounded. Failure to comply will result in an electric shock.
- During wiring, follow the proper electrostatic discharge (ESD) procedures, and wear an antistatic wrist strap. Failure to comply will result in damage to internal equipment circuits.

## WARNING

- Never connect the power cable to output terminals of the equipment. Failure to comply may cause equipment damage or even a fire.
- When connecting a drive with the motor, make sure that the phase sequences of the drive and motor terminals are consistent to prevent reverse motor rotation.
- Wiring cables must meet diameter and shielding requirements. The shielding layer of the shielded cable must be reliably grounded at one end.
- After wiring, make sure that no screws are fallen and cables are exposed in the equipment.

## Power-on

## DANGER

- Before power-on, make sure that the equipment is installed properly with reliable wiring and the motor can be restarted.
- Before power-on, make sure that the power supply meets equipment requirements to prevent equipment damage or even a fire.
- At power-on, unexpected operations may be triggered on the equipment. Therefore, stay away from the equipment.
- After power-on, do not open the cabinet door and protective cover of the equipment. Failure to comply will result in an electric shock.
- Do not touch any wiring terminals at power-on. Failure to comply will result in an electric shock.
- Do not remove any part of the equipment at power-on. Failure to comply will result in an electric shock.

## Operation

## $\triangle$ <br> DANGER

- Do not touch any wiring terminals during operation. Failure to comply will result in an electric shock.
- Do not remove any part of the equipment during operation. Failure to comply will result in an electric shock.
- Do not touch the equipment shell, fan, or resistor for temperature detection. Failure to comply will result in heat injuries.
- Signal detection must be performed by only professionals during operation. Failure to comply will result in personal injuries or equipment damage.

## WARNING

- Prevent metal or other objects from falling into the device during operation. Failure to comply may result in equipment damage.
- Do not start or stop the equipment using the contactor. Failure to comply may result in equipment damage.

## Maintenance

## DANGER

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed by only professionals.
- Do not maintain the equipment at power-on. Failure to comply will result in an electric shock.
- Before maintenance, cut off all equipment power supplies and wait at least 10 minutes.

## WARNING

- Perform daily and periodic inspection and maintenance for the equipment according to maintenance requirements and keep a maintenance record.

## Repair

## DANGER

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed by only professionals.
- Do not repair the equipment at power-on. Failure to comply will result in an electric shock.
- Before inspection and repair, cut off all equipment power supplies and wait at least 10 minutes.

## ! WaRNING

- Require repair services according to the product warranty agreement.
- When the equipment is faulty or damaged, require professionals to perform troubleshooting and repair by following repair instructions and keep a repair record.
- Replace quick-wear parts of the equipment according to the replacement guide.
- Do not operate damaged equipment. Failure to comply may result in worse damage.
- After the equipment is replaced, perform wiring inspection and parameter settings again.

## Disposal

## WARNING

- Retire equipment by following local regulations or standards. Failure to comply may result in property damage, personal injuries, or even death.
- Dispose of or recycle retired equipment by following industry waste disposal standards to avoid environmental pollution.

## Safety Signs

- Description of safety signs in the user guide

For safe equipment operation and maintenance, comply with safety signs on the equipment, and do not damage or remove the safety labels. The following table describes the safety signs.

| Safety Sign | Description |
| :---: | :--- |
|  | Read the user guide before installation and operation. Failure <br> to comply will result in an electric shock. <br> Do not remove the cover at power-on or within 10 minutes <br> after power-off. <br> Before maintenance, inspection, and wiring, cut off input and <br> output power, and wait at least 10 minutes until the power <br> indicator is off. |

### 1.2 Components

The AC drive has either a plastic housing (three-phase $380 \mathrm{~V}, 0.4$ to 15 kW models and three-phase $220 \mathrm{~V}, 0.4$ to 7.5 kW models used as an example) or a sheet metal housing (200 to 450 kW models used as an example), depending on the voltage and power class, as shown in the following figures.

Figure 1-2 Product parts (MD500T0.4GB to MD500T15GB, MD500-2T0.4GB to MD500-2T7.5GB)

Figure 1-3 Product parts (MD500T200G to MD500T450G)

[^0]Table 1-3 Technical specifications of the MD500 series AC drive

|  | Item | Description |
| :---: | :---: | :---: |
| Standard functions | Input frequency resolution | Digital setting: 0.01 Hz <br> Analog setting: Maximum frequency $\times 0.025 \%$ |
|  | Control mode | Sensorless vector control (SVC) <br> Feedback vector control (FVC) <br> Voltage/Frequency (V/F) control |
|  | Startup torque | $\begin{aligned} & 0.25 \mathrm{~Hz} / 150 \% \text { (SVC) } \\ & 0 \mathrm{~Hz} / 180 \% \text { (FVC) } \\ & \hline \end{aligned}$ |
|  | Speed range | 1:200 (SVC) 1:1000 (FVC) |
|  | Speed stability accuracy | $\pm 0.5 \%$ (SVC) $\pm 0.02 \%$ (FVC) |
|  | Torque control accuracy | $\pm 3 \%$ (FVC); $\pm 5 \%$ for 5 Hz above (SVC) |
|  | Torque boost | Automatic boost; Customized boost 0.1 \% to 30.0 \% |
|  | V/F curve | Straight-line V/F curve Multi-point V/F curve Complete V/F separation Half V/F separation |
|  | Ramp mode | Straight-line ramp <br> S-curve ramp <br> Four separate acceleration/deceleration time settings in the range of 0.0 s to 6500.0 s. |
|  | DC injection braking | DC injection braking frequency: 0 Hz to the maximum frequency <br> DC injection braking active time: 0.0 s to 36.0 s. <br> Current level of DC injection braking: $0.0 \%$ to $100.0 \%$. |
|  | Jog running | Frequency range of jog running: 0.00 to 50.00 Hz Acceleration/Deceleration time of jog running: 0.0 s to 6500.0s |
|  | simple PLC and multispeed running | The system implements up to 16 speeds by using the simple PLC function or control terminals. |
|  | Built-in PID | The system implements the proportional-integralderivative (PID) function in the closed-loop control. |
|  | Automatic voltage regulation (AVR) | The system maintains a constant output voltage automatically when the grid voltage changes through the permissible range. |
|  | Overvoltage and overcurrent stall control | The system limits the output current and voltage automatically during operation to prevent frequent or excessive trips. |
|  | Overcurrent fast prevention | The function helps to avoid frequent overcurrent faults. |
|  | Torque limit and control | The system limits the torque automatically to prevent frequent overcurrent tripping during operation. Torque control is applied in vector control. |

| Item |  | Description |
| :---: | :---: | :---: |
| Customized functions | Power dip ride-through | The load feedback energy compensates for any voltage reduction, allowing the AC drive to continue to operate for a short time during power dips. |
|  | Overcurrent fast prevention | The function helps to avoid frequent overcurrent faults. |
|  | Virtual I/O | Five groups of virtual digital inputs/outputs (DI/DO) support simple logic control. |
|  | Timing control | Time range: 0.0 to 6500.0 minutes |
|  | Dual-motor switchover | The AC drive can control up to two motors using two groups of motor parameters. |
|  | Multiple field buses | The AC drive supports four field buses: Modbus, PROFIBUS-DP, CANlink, and CANopen. |
|  | Motor overheat protection | The optional input/output (I/O) extension card allows the AI3 terminal to receive a signal from the motor temperature sensor input (PT100, PT1000) to implement motor overheat protection. |
|  | Multiple encoder types | The AC drive supports a range of different encoder types, including the differential encoder, open-collector encoder, UVW encoder, and resolver. |
|  | User programmable function | The optional programming card supports secondary development in a programming environment compatible with the Inovance programmable logic controller (PLC). |
|  | Advanced commissioning software | Software in the AC drive allows users to configure some operating parameters, and provides a virtual oscilloscope display that shows system status. |

| Item |  | Description |
| :---: | :---: | :---: |
| Running | Running command | Allows different methods of switching between running commands: Operating panel; terminal I/O control; and serial communication |
|  | Main frequency reference setting channel | Supports up to 10 frequency reference setting channels and allows different methods of switching between frequency reference setting channels: <br> - Digital setting <br> - Analog voltage reference <br> - Analog current reference <br> - Pulse reference <br> - Communication reference |
|  | Auxiliary frequency reference setting channel | Supports up to 10 auxiliary frequency sources, and allows fine tuning of the auxiliary frequency and main \& auxiliary calculation. |
|  | Input terminals | Standard: <br> Five digital input (DI) terminals, one of which supports up to 100 kHz high-speed pulse inputs Two analog input (AI) terminals, one of which supports only 0 to 10 V input, and the other supports 0 to 10 V and 0 to 20 mA current input <br> Expanded capacity: <br> Five digital input (DI) terminals <br> One Al terminal that supports -10 to +10 V voltage input and PT100/PT1000 motor temperature sensor inputs |
|  | Output terminals | Standard: <br> - Single high-speed pulse output terminal (opencollector) for a square-wave signal output in the frequency range of 0 to 100 kHz <br> - Single DO terminal <br> - Single relay output terminal <br> - Single analog output (AO) terminal that supports either a current output in the range 0 to 20 mA or a voltage output in the range 0 to 10 V <br> Expanded capacity: <br> - Single digital output (DO) terminal <br> - Single relay output terminal <br> Single analog output (AO) terminal that supports either a current output in the range 0 to 20 mA or a voltage output in the range 0 to 10 V |
| Display and operating panel | LED display | Shows parameters. |
|  | LCD display | It is optional and shows parameters in Chinese or English. |
|  | Parameter copy | The LCD operating panel can be used to copy parameters quickly. |
|  | Key locking and function selection | Keys on the control panel can be locked partially or electronically to prevent accidental operation. |

| Item |  | Description |
| :---: | :---: | :---: |
| Protections | Phase loss protection | Input phase loss protection Output phase loss protection |
|  | Instantaneous overcurrent protection | The AC drive stops when $250 \%$ of the rated output current is exceeded. |
|  | Overvoltage protection | The $A C$ drive stops when the $D C$ voltage of the main circuit is above 820 V . |
|  | Undervoltage protection | The AC drive stops when the DC voltage of the main circuit is below 350 V . |
|  | Overheat protection | Protection is triggered when the inverter bridge gets overheated. |
|  | Overload protection | The AC drive stops after running at $150 \%$ of rated current for 60 seconds. |
|  | Overcurrent protection | The AC drive stops when 2.5 times of rated current of the $A C$ drive is exceeded. |
|  | Braking protection | Braking unit overload protection Braking resistor short-circuit protection |
|  | Short-circuit protection | Output phase-to-phase short-circuit protection Output phase-to-ground short-circuit protection |
| Environment | Installation location | Install the AC drive where it is indoors and protected from direct sunlight, dust, corrosive or combustible gases, oil smoke, vapor, ingress of water or any other liquid, and salt. |
|  | Altitude | Below 1000 m If the altitude exceeds 1000 m , de-rating by $1 \%$ for per 100 m increase <br> Maximum altitude: 3000 m <br> (Note: The maximum altitude for 0.4 to 3 kW models is 2000 m . For use at the altitude higher than 2000 m , contact the agent or Inovance.) |
|  | Ambient temperature | $-10^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$ <br> If the ambient temperature is $40^{\circ} \mathrm{C}$ to $50^{\circ} \mathrm{C}$, de-rating by $1.5 \%$ per $1^{\circ} \mathrm{C}$ increase |
|  | Humidity | Less than 95\% RH non-condensing |
|  | Vibration | Less than $5.9 \mathrm{~m} / \mathrm{s}^{2}(0.6 \mathrm{~g})$ |
|  | Storage temperature | $-20^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$ |

### 1.4 Overall Dimensions

### 1.4.1 Overall Dimensions of MD500T0.4GB to MD500T160G and MD5002T0.4GB to MD500-2T55G

## 2 System Connections

### 2.1 MD500 System Connection Diagram

When using the AC drive to drive asynchronous motors, a variety of electrical devices must be installed on both input and output sides to ensure system safety and stability. The following figure shows how to configure the AC drive ( 0.4 kW and above) to operate with the peripheral devices.

Figure 2-1 MD500 series system composition

- The preceding figure is just a schematic system connection diagram of the MD500 series AC drive. For peripherals and options, see " 9 Specifications and Model Selection" in 19010355 MD500 Series AC Drive Advanced User Guide.

### 2.2 MD500 System Structure

Description of peripheral electrical devices in the MD500 series AC drive system

| Device | Mounting Location | Function Description |
| :--- | :--- | :--- |
| Breaker | Between the power <br> supply and AC drive <br> input side | MCCB: Cuts off power supply when overcurrent occurs <br> on downstream devices. <br> Leakage breaker: Provides protection against potential <br> leakage current during drive running to prevent <br> electric shock and even a fire. |
| Fuse | Between the power <br> supply and AC drive <br> input side | Provides protection in case of short circuit. |\(\left|\begin{array}{l}(Electromagnetic) <br>

Contactor\end{array} $$
\begin{array}{l}\text { Between the breaker } \\
\text { and AC drive input } \\
\text { side }\end{array}
$$ \begin{array}{l}Switches ON/OFF the AC drive. Do not start/stop the <br>
AC drive frequently by switching the contactor ON/OFF <br>
(time interval is at least one hour) nor use it to directly <br>

start the AC drive.\end{array}\right|\)| Input reactor |
| :--- |
| AC drive input side |
| EMC filter |
| Eliminates higher harmonics of the input side |
| effectively and prevents other devices from being |
| damaged due to distortion of voltage waveform. |
| Eliminates input current unbalance caused by inter- |
| phase unbalance. |

| Device | Mounting Location | Function Description |
| :--- | :--- | :--- |
| dv/dt reactor | AC drive output side, <br> close to the AC drive | Optional. Protects motor insulation and reduces <br> bearing current. |
| Output magnetic <br> ring | AC drive output side, <br> close to the AC drive | Reduces bearing current. |
| Motor | AC drive output side | Select an appropriate motor. |
| External operating <br> panel | Interface of the <br> external operating <br> panel | External LED operating panel MD32NKE1 and LCD <br> operating panel MDKE9 |

## $\because$ <br> NOTE

- Do not install a capacitor or surge protection device (SPD) on the output side of AC drive. Otherwise, the AC drive, capacitor, or SPD may be damaged.
- Inputs/Outputs (main circuit) of the AC drive contain harmonics, which may interfere with the communication device connected to the AC drive. Therefore, install an anti-interference filter to minimize interference.

### 2.3 Options

Peripherals and options include braking units and function extension cards, as listed in the following table. For use of each option, see its user manual. If you need to purchase the following options, specify the required option in the order.

Table 2-1 Options

| Name | Model | Description | Remarks |
| :---: | :---: | :---: | :---: |
| Built-in braking unit | GB-type | Three phase 380-480 V models: not optional for $0.4-15 \mathrm{~kW}$; optional for 18.5-75 kW <br> Three phase 200-240 V models: not optional for 0.4-7.5 kW, optional for 11-37 kW |  |
| External braking unit | MDBUN and MDBU | Three phase 380-480 V models: 90 kW and above <br> Three phase 200-240 V models: 45 kW and above | Multiple braking units of 90 kW or above are connected in parallel. |
| I/O extension card 1 | MD38IO1 | Provides: <br> - Five extra DI terminals <br> - An analog input (AI3) terminal <br> - A relay output terminal <br> - A digital output terminal <br> - An analog output terminal MODBUS/CANlink supported <br> Can be connected to PT100 and PT1000. | Available for models of 15 kW or above |
| I/O extension card 2 | MD38102 | Provides three extra DI terminals. | Available for all models |

2 System Connections

| Name | Model | Description | Remarks |
| :---: | :---: | :---: | :---: |
| I/O extension card 3 | MD38IO3 | Provides: <br> - Three extra DI terminals <br> - One RS-485 communication signal isolation input terminal One NO relay output terminal | Available for all models |
| RS-485 <br> communication card | MD38TX1 | Provides the isolated Modbus communication adapter card. | Available for all models |
| CANlink communication card | MD38CAN1 | CANlink communication adapter card | Available for all models |
| CANopen communication card | MD38CAN2 | CANopen communication adapter card | Available for all models |
| Profbus-DP communication card | MD38DP2 | Profbus-DP communication card | Available for models of 15 kW or above |
| PROFINET communication extension card | MD500-PN1 | PROFINET communication adapter card | Available for all models |
| User programmable card | MD38PC1 | User programmable extension card Compatible with H1U-Series PLCs of Inovance | Available for models of 15 kW or above |
| Differential encoder interface card | MD38PG1 | Differential encoder resolver interface card, 5 V power supply | Available for all models |
| Resolver interface card | MD38PG4 | For use with a resolver that has an excitation frequency of 10 kHz The card has a DB9 interface. | Available for all models |
| Open collector encoder interface card | MD38PG5 | Open collector encoder interface card, 1:1 frequency dividing, 15 V power supply | Available for all models |
| Open collector encoder interface card | MD38PG5D | Open collector encoder interface card, optional multiplying frequency division output, 15 V power supply | Available for all models |
| Differential encoder interface card | MD38PG6 | Differential encoder resolver interface card, 5 V power supply | Available for all models |
| Differential encoder interface card | MD38PG6D | Differential encoder resolver interface card, optional multiplying frequency division output, 5 V power supply | Available for all models |

| Name | Model | Description | Remarks |
| :---: | :---: | :---: | :---: |
| MD38PGMD new multi-functional encoder card | MD38PGMD | - Compatible with differential input, open-collector input, and push-pull input <br> Differential output and open-collector output supported <br> Compatible with $A / B$ phase input interfaces of often-used encoders and host controllers. | Available for all models |
| External LED operating panel | MD32NKE1 | Connected to the external LED operating panel through the RJ45 interface | Available for the MD series |
| External LCD operating panel | MDKE9 | External LCD display and operating panel | Parameter copy and download supported |
| Mounting base of the MDKE9 operating panel | CP600- <br> BASE1 |  |  |
| External operating panel cable | MDCAB | Standard: 8 cores <br> Can be connected to MD32NKE1, MD32KC, and MDCP | Standard length: 3 m |
| Through-hole mounting bracket | $\begin{aligned} & \text { MD500-AZJ- } \\ & \text { A1T*} \end{aligned}$ | Used to mount the drive to the middle of the cabinet | Each model has its own bracket. For details, see "Table 3-1 Through-hole mounting bracket models (three phase $380-480 \mathrm{~V}$ )". |
| Cable support bracket | $\begin{aligned} & \text { MD500-AZJ- } \\ & \text { A2T** } \end{aligned}$ | Used for secondary fixing of power cables and stable grounding of the shield | For details, see "Table 3-4 Specification of the cabinet with fans on the top" in 19010355 MD500 Series AC Drive Advanced User Guide. |

### 2.4 Selection of Cables, Breakers, and Contactors

Table 2-2 Cable selection (three phase 380-480 V)

| Model | RST/UVW |  | Ground Cable |  | Terminal <br> Width of the AC Drive (mm) | Screw |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

### 2.5 Selection of the AC Output Reactor

Whether to install an AC output reactor on the power output side is dependent on actual situations. Cable connecting the AC drive and motor cannot be too long. Otherwise, capacitance enlarges and thus high-harmonics current may be easily generated. To avoid these problems, install an AC output reactor close to the AC drive if the cable length is equal to or larger than the values listed in the following table.

Table 2-7 Cable length limit with the output reactor configured (three phase 380-480 V)

| AC Drive <br> Power (kW) | Rated <br> Voltage (V) | Minimum Cable <br> Length with <br> Output Reactor <br> Configured (m) | AC Drive <br> Power (kW) | Rated Voltage <br> $(\mathrm{V})$ | Minimum Cable <br> Length with Output <br> Reactor Configured <br> $(\mathrm{m})$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $0.4-4$ | $200-500$ | 50 | 15 | $200-500$ | 125 |
| 5.5 | $200-500$ | 70 | 18.5 | $200-500$ | 135 |
| 7.5 | $200-500$ | 100 | $\geqq 22$ | $200-500$ | 150 |
| 11 | $200-500$ | 110 |  |  |  |

Table 2-8 Cable length limit with the output reactor configured (three phase 200-240 V)

| AC Drive |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Power (kW) | Rated <br> Voltage <br> $(\mathrm{V})$ | Minimum Cable <br> Length with <br> Output Reactor <br> Configured (m) | AC Drive <br> Power <br> $(\mathrm{kW})$ | Rated <br> Voltage <br> $(\mathrm{V})$ | Minimum Cable <br> Length with <br> Output Reactor <br> Configured (m) |
| $0.4-3$ | $200-500$ | 50 | 7.5 | $200-500$ | 125 |
| 3.7 | $200-500$ | 70 | $\geqq 11$ | $200-500$ | 150 |
| 5.5 | $200-500$ | 110 |  |  |  |

| MD500-2T55G | 55 | MDBUN-60-2T | 2 | $6000 \mathrm{~W} 4.4 \Omega$ | 2 | - | 4 |

- The minimum braking resistance in the preceding table supports the operating condition with ED of $10 \%$ and the longest time for single braking of 10 s.
- The default initial braking voltage for built-in braking units is 760 V and 350 V when the input voltage is 380 to 480 VAC and 200 to 240 V , respectively.
- The default initial braking voltage is 670 V for MDBUN-60-T, MDBUN-90-T, and MDBU-200-B when the input voltage is lower than or equal to 440 VAC , and 760 V for MDBUN-$60-5 T$, MDBUN-90-5T, and MDBU-200-C when the input voltage is above 440 VAC . The resistance of the braking resistor can be adjusted with the initial braking voltage.
NOTE
- The preceding table is for reference only. You can select the resistance and power of the braking resistor as required (the resistance cannot be lower than the reference value while the power may be higher than the reference value). Selection of the braking resistor model is determined by the generation power of motors and is also related to the system inertia, deceleration time and potential energy load. For systems with high inertia, and/or short deceleration time, and/or frequent braking, select a braking resistor with higher power and lower resistance.

### 2.7 External Operating Panels

## 1) External LED operating panel MD32NKE1

MD32NKE1 is an external operating panel applicable to the AC drive. It adopts the LED display and has the same operation mode as the operating panel on the AC drive. For details, see " 4 Panel Operations". It is optional and easy for commissioning.

$2 \times \varnothing 3.5$

Figure 2-2 Mounting dimensions of MD32NKE1 (unit: mm)
2) External LCD operating panel MDKE9

MDKE9 is an optional external LCD keypad. It supports copy, download, and modification of all parameters and is easy to use in both Chinese and English. The following figure shows its appearance and keys. (For details, see "4 Panel Operations" in 19010355 MD500 Series AC Drive Advanced User Guide.)

Figure 2-3 Appearance of the MDKE9 external operating panel

Figure 2-4 Mounting dimensions of the MDKE9 external operating panel (unit: mm)
3) MDKE9 mounting base

Before installing the MDKE9 operating panel on the cabinet door, install the CP600BASE1 (optional) base first. The mounting dimensions are shown below.

Figure 2-5 Sheet metal slot dimensions (unit: mm)

Figure 2-6 Mounting base dimension limits (unit: mm)

## 3 Installation and Wiring

### 3.1 Installation

### 3.1.1 Installation Environment

1) Ambient temperature: The AC drive's service life is greatly influenced by the ambient temperature. Do not run the $A C$ drive under a temperature exceeding the allowed temperature range $\left(-10^{\circ} \mathrm{C}\right.$ to $\left.+50^{\circ} \mathrm{C}\right)$.
2) Install the AC drive on the surface of a flame retardant object, and ensure that sufficient space is left around the enclosure to allow for efficient heat dissipation. The AC drive generates great heat during working. Use screws to install the AC drive on the mounting bracket vertically.
3) Install the AC drive without strong vibration. Ensure that the mounting location is not affected by levels of vibration that exceeds 0.6 G . Keep the AC drive away from punch machines.
4) Ensure that the mounting location is away from direct sunlight, damp or water drops.
5) Ensure that the mounting location is protected against corrosive, combustible or explosive gases and vapors.
6) Ensure that the mounting location is free from oil and dust.

Figure 3-1 Installation environment requirements
7) The AC drive must be installed in a fireproof cabinet with doors that provide effective electrical and mechanical protection. The installation must conform to local and regional laws and regulations, and to relevant IEC requirements.

### 3.1.2 Backplate Mounting and Through-Hole Mounting

1) Backplate mounting

Figure 3-2 Backplate mounting of MD500T0.4GB to MD500T37G(B) and MD500-2T0.4GB to MD500-2T18.5G(B)

Figure 3-3 Backplate mounting of MD500T45G(B) to MD500T160G and MD500-2T22G(B) to MD500-2T55G

- In this mode, do not just secure two screws on the top of the AC drive; otherwise, the AC drive may fall off or be damaged due to the unbalanced effect on the fixed part during long-time running.

2) Through-hole mounting

Figure 3-4 Through-hole mounting of MD500T0.4GB to MD500T37G(B) and MD500-2T0.4GB to MD500-2T18.5G(B)

| MD500-AZJ-A1T4 | MD500-2T7.5GB |  | MD500-2T55G |

### 3.1.3 Mounting in the Cabinet

## 1) Ventilation

Only one AC drive of models MD500T200G to MD500T450G can be mounted in a cabinet and ventilation space must be considered. Follow the following guidance for specific model and application scenarios.

- Direct discharging cabinet (without fans on the top)

Figure 3-6 Direct discharging cabinet

Table 3-3 Specification of the direct discharging cabinet

| AC Drive Model | Quantity of Fans | Total Air Volume (CFM) | Effective Area of Cabinet Top Air Inlet ( $\mathrm{mm}^{2}$ ) | Effective Area of Cabinet Top Air Outlet ( $\mathrm{mm}^{2}$ ) |
| :---: | :---: | :---: | :---: | :---: |
| MD500T132G | 2 | 541 | 31809 | 50894 |
| MD500T160G | 2 | 620 | 31809 | 50894 |
| MD500T200G(-L) | 2 | 586 | 31809 | 50894 |
| MD500T220G(-L) | 2 | 722 | 31809 | 50894 |
| MD500T250G(-L) | 3 | 789 | 47713 | 76341 |
| MD500T280G(-L) | 3 | 882 | 47713 | 76341 |
| MD500T315G(-L) | 3 | 644 | 47713 | 76341 |
| MD500T355G(-L) | 3 | 796 | 47713 | 76341 |
| MD500T400G(-L) | 3 | 796 | 47713 | 76341 |
| MD500T450G(-L) | 3 | 796 | 47713 | 76341 |
| Note: <br> $C F M=0.0283 \mathrm{~m}^{3} / \mathrm{min}$ <br> "Effective Area" indicates the through-hole area. |  |  |  |  |

Cabinet with fans on the top

Figure 3-7 Cabinet with fans on the top

Table 3-4 Specification of the cabinet with fans on the top

| AC Drive Model | Quantity of Fans | Total Air Volume (CFM) | Effective Area of Cabinet Top Air Inlet ( $\mathrm{mm}^{2}$ ) | Max. Air Volume Required by the Top Fan (CFM) | Effective Area of Cabinet Top Air Outlet $\left(\mathrm{mm}^{2}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| MD500T132G | 2 | 541 | 31809 | 649 | $\begin{aligned} & S=0.942 \times N \times \text { (Dout2 } \\ & - \text { DHUB2) } \end{aligned}$ |
| MD500T160G | 2 | 620 | 31809 | 744 |  |
| MD500T200G(-L) | 2 | 586 | 31809 | 703 | In the preceding formula, N indicates the number of top fans, Dout indicates the diameter of the top fan, and DHUB indicates the diameter of the top fan center HUB. |
| MD500T220G(-L) | 2 | 722 | 31809 | 866 |  |
| MD500T250G(-L) | 3 | 789 | 47713 | 947 |  |

| MD500T450G(-L) | 3 | 796 | 47713 | 955 |  |
| Note: <br> - CFM $=0.0283 \mathrm{~m}^{3} / \mathrm{min}$ <br> - "Effective Area" indicates the through-hole area. |  |  |  |  |  |

### 3.2 Wiring

### 3.2.1 Standard Wiring Diagram

As shown in the following figure, the wiring part marked by the double-headed arrow in 0.4 to $75 \mathrm{~kW} / 0.4$ to 37 kW models is different from that in 90 to $450 \mathrm{~kW} / 45$ to 55 kW models.

Figure 3-8 Typical wiring

### 3.2.2 Main Circuit Terminals

Figure 3-9 Terminal arrangement in MD500T0.4GB to MD500T15GB and MD500-2T0.4GB to MD500-2T7.5GB

Figure 3-10 Terminal arrangement in MD500T18.5G(B) to MD500T160G and MD500T11G(B) to MD500T55G

Figure 3-11 Terminal arrangement in MD500T200G(-L) to MD500T450G(-L)

Table 3-5 Description of main circuit terminals

| Terminal | Name | Description |
| :---: | :--- | :--- |
| R, S, T | Three-phase power <br> supply input terminals | Connected to AC input three-phase power supply. |
| $(+),(-)$ | DC bus positive and <br> negative terminals | Common DC bus input, connected to the external <br> braking unit for AC drives of 90 kW and above |
| $(+)$, BR | Braking resistor <br> connection terminals | Connected to the external braking resistor for AC drive of <br> 75 kW and below |

| Terminal | Name | Description |
| :---: | :--- | :--- |
| $\mathrm{U}, \mathrm{V}, \mathrm{W}$ | AC drive output terminals | Connected to a three-phase motor |
| $\perp$ | Ground (PE) terminal | Grounding connection |

### 3.2.3 Control Circuit Terminals

Figure 3-12 Control circuit terminal arrangement

Table 3-6 Description of control circuit terminals

| Type | Terminal Mark | Terminal Name | Description |
| :---: | :---: | :---: | :---: |
| Power supply | +10 V-GND | +10 V power supply | Provides +10 V power supply to an external unit. Its maximum output current is 10 mA . <br> Generally used to supply an external potentiometer of 1 to $5 \mathrm{k} \Omega$ |
|  | +24V-COM | +24 V power supply | Provides +24 V power supply to an external unit. Generally used for power supply for DI/DO terminals and external sensors. <br> Maximum output current: $200 \mathrm{~mA}^{[1]}$ |
|  | OP | Input <br> terminal for external power supply | Connected to +24 V by default. <br> When DII to DI5 need to be driven by external signals, OP must be disconnected from +24 V and connected to an external power supply. |
| Analog input | Al1-GND | Analog input 1 | Voltage range of inputs: 0 to 10 VDC Input impedance: $22 \mathrm{k} \Omega$ |
|  | Al2-GND | Analog input <br> 2 | Either a voltage or current input, determined by jumper J9 Input voltage range: 0 to 10 VDC <br> Input current range: 0 to 20 mA <br> Input impedance: $22 \mathrm{k} \Omega$ (voltage input), $500 \Omega$ or $250 \Omega$ (current input) decided byJ10 ${ }^{[2]}$ |
| Digital input | DII- OP | Digital input 1 | Optically-coupled isolation compatible with dual-polarity inputs <br> Input impedance: $1.39 \mathrm{k} \Omega$ <br> Voltage range for inputs: 9 to 30 V |
|  | DI2-OP | Digital input 2 |  |
|  | DI3-OP | Digital input 3 |  |
|  | DI4- OP | Digital input 4 |  |
|  | DI5-OP | High-speed pulse input | In addition to having the same features as DI1 to DI4, DI5 can also be used for high-speed pulse inputs. <br> Maximum input frequency: 100 kHz Input impedance: $1.03 \mathrm{k} \Omega$ |
| Analog output | AO1-GND | Analog output 1 | Either a voltage or current output, determined by jumper J7. <br> Output voltage range: 0 to 10 V <br> Output current range: 0 to 20 mA |
| Digital output | D01-CME | Digital output $1$ | Optically-coupled isolation, dual-polarity open-collector output <br> Output voltage range: 0 to 24 V <br> Output current range: 0 to 50 mA <br> Note that CME and COM are internally insulated, but are shorted externally by a jumper. In this case, DO1 is driven by +24 V by default. Remove the jumper link if you need to apply external power to DO1. |
|  | FM- COM | High-speed pulse output | Controlled by F5-00 (FM terminal output selection). <br> Maximum output frequency: 100 kHz <br> When used as an open-collector output, the specification is the same as for DO1. |

| Type | Terminal Mark | Terminal Name | Description |
| :---: | :---: | :---: | :---: |
| Relay output | T/A-T/B | Normallyclosed (NC) terminal | Contact driving capacity:$\begin{aligned} & 250 \mathrm{VAC}, 3 \mathrm{~A}, \operatorname{Cos} \Phi=0.4 \\ & 30 \mathrm{VDC}, 1 \mathrm{~A} \end{aligned}$ |
|  | T/A-T/C | Normallyopen (NO) terminal |  |
| Auxiliary interfaces | J13 | Extension card interface | Interface for the 28-core terminal and optional cards (I/O extension card, PLC card, and various bus cards) |
|  | J4 | PG card interface | The open-collector, differential, and resolver interfaces are selectable options. |
|  | J11 | External operating panel interface | Connected to an external operating panel. |
| Jumper ${ }^{[3]}$ | J7 | AO1 output selection | Either a voltage or a current output. Voltage output by default |
|  | J9 | Al2 input selection | Either a voltage or a current input. Voltage input by default |
|  | J10 | Al2 input impedance selection | Either $500 \Omega$ or $250 \Omega$ input. $500 \Omega$ input by default |

[1] When the ambient environment is above $23^{\circ} \mathrm{C}$, the output current must be de-rated for 1.8 mA per $1^{\circ} \mathrm{C}$ rise. The maximum output current is 170 mA at $40^{\circ} \mathrm{C}$. When OP is shorted to 24 V , the current of the DI must also be considered.
[2] Select $500 \Omega$ or $250 \Omega$ input impedance according to the with-load capacity of signal source. For example, if $500 \Omega$ is selected, the maximum output voltage of signal source cannot be smaller than 10 V so that AI2 can measure 20 mA current.
[3] For positions of jumpers J7, J9 and J10, see Figure 3-12.

## 4 Panel Operations

### 4.1 Introduction

The LED operating panel allows you to set and modify parameters, monitor system status, and start or stop the AC drive. For details, see "4 Panel Operation" in 19010355 MD500 Series AC Drive Advanced User Guide. An external LED (MD32NKE1) or LCD (MDKE9) operating panel is also available as an option. For details, see "2.7 External Operating Panels".

Figure 4-1 Details of the operating panel

### 4.2 Keys on the Operating Panel

Table 4-1 Function of keys on the operating panel

| Key | Name | Function |
| ---: | :--- | :--- |
| PRG | Programming | Enter or exit Level I menu. |
| ENTER | Enter | Enter each level of menu interface and confirm displayed parameter <br> setting. |
| $\triangle$ | Increment | Increase the displayed value when editing a parameter value. |
| $\nabla$ | Decrement | Decrease the displayed value when editing a parameter value. |
| D | Shift | Select the displayed parameter in the STOP or RUNNING status. <br> Select the digit to be modified when modifying a parameter value. |
| RUN | RUN | Start the AC drive when using the operating panel control mode. |

| Key | Name | Function |
| :---: | :--- | :--- |
| $\frac{\text { STOP }}{\text { RES }}$ | Stop/Reset | Stop the AC drive when the AC drive is in the RUNNING status. <br> Perform a reset operation when the AC drive is in the FAULT status. |
| MF.K | Multifunction | Perform a function switchover as defined by the setting of F7-01 (MF.K <br> key function selection). |
| QUICK | Menu mode <br> selection | Switch over between menu modes as defined by the setting of FP-03 <br> (Selection of individualized parameter display). |

### 4.3 Indicators on the Operating Panel

 indicates that the light flashes.

Table 4-2 Indicators on the operating panel

| State |  | Indication |
| :---: | :---: | :---: |
| RUN <br> Running status indicators | $\begin{gathered} \text { O } \\ \text { RUN } \end{gathered}$ | OFF indicates the STOP status. |
|  | $\begin{aligned} & \text { EO } \\ & \text { RUN } \end{aligned}$ | ON indicates the RUNNING status. |
| LOCAL/REMOT <br> Running command indicators | LOCAL/ REMOT | OFF indicates under operating panel control. |
|  | ㅇ́́․ LOCÁL/REMOT | ON indicates under terminal control. |
|  | シós <br> LOCAL/REMOT | FLASHING indicates under serial communication control. |
| FWD/REV <br> Forward and reverse rotation indicators | FWD/REV | OFF indicates forward motor rotation. |
|  | $\begin{aligned} & \text { EÓ } \\ & \text { FWD/REV } \end{aligned}$ | ON indicates reverse motor rotation. |
| TUNE/TC <br> Auto-tuning, torque control and fault indicators | TUNE/TC | OFF indicates that the AC drive is normal. |
|  | $\begin{aligned} & \text { ̇ÓN } \\ & \text { TUUE/TC } \end{aligned}$ | ON indicates the torque control mode. |
|  | $\therefore \bigcirc \div$ <br> TUNE/TC | FLASHING SLOWLY (once a second) indicates auto-tuning status. |
|  | $\begin{aligned} & \text { ̀' } \\ & \text { TUNE/TC } \end{aligned}$ | FLASHING QUICKLY (four times a second) indicates a fault condition. |
|  |  | Hz for frequency |
|  |  | A for current |
| $\stackrel{\mathrm{Hz}}{\mathrm{O}}-\mathrm{RPM}-\mathrm{O}^{\mathrm{A}}-\% \text { - } \mathrm{V}^{\mathrm{V}} \mathrm{E}$ |  | V for voltage |
|  |  | RPM for motor speed |
|  |  | Percentage |

## 5 Basic Operations and Trial Run

### 5.1 Quick Commissioning

Figure 5-1 Quick commissioning

### 5.2 Precautions Before Power-on

Be sure to check the following items before powering on the AC drive.

| Item | Description |
| :--- | :--- |
| Voltage | The voltage is AC 380 to 480 V or 220 to 240 V and $50 / 60 \mathrm{~Hz}$. |
|  | The input terminals $\mathrm{R}, \mathrm{S}$, and T are correctly connected. |
|  | The AC drive is connected to the motor properly. |
| Connection of AC drive output <br> terminals and motor terminals | The AC drive output terminals $\mathrm{U}, \mathrm{V}$, and W are firmly connected to <br> the motor terminals. |
| Connection of terminals in the <br> control circuit | Terminals of the control circuit are firmly connected to other <br> control devices. |
| Status of control terminals | All terminals of the control circuit are OFF (the AC drive is not <br> running). |

| Item | Description |
| :--- | :--- |
| Load | The motor is idle and not connected to the mechanical system. |

### 5.3 Status Display After Power-on

The following table lists the display on the operating panel after the AC drive is powered on.

| State | Display | Description |
| :--- | :---: | :--- |
| Normal | 5OM | Default value 50.00 Hz is displayed. |
| Fault | Erral | The AC drive stops and displays an error code. |

### 5.4 Parameter Initialization

You can restore the AC drive to factory parameters. After initialization, FP-01 is automatically reset to 0 .

| FP-01 | Parameter initialization |  | Default | 0 |
| :---: | :---: | :---: | :--- | :--- |
|  | Setting <br> Range | 0 | No operation |  |
|  |  | 1 | Restore factory parameters except motor parameters |  |
|  |  | Clear records |  |  |
|  |  | 4 | Back up current user parameters |  |
|  |  | 501 | Restore user backup parameters |  |

1: Restore factory parameters except motor parameters
When FP-01 is set to 1 , most of the parameters are restored to the factory default settings. However, motor parameters, F0-22 (Frequency reference resolution), error records, F7-09 (Accumulative running time), F7-13 (Accumulative power-on time), F714 (Accumulative power consumption), and F7-07 (Heatsink temperature of AC drive) cannot be restored.

## 2: Clear records

Error records, F7-09 (Accumulative running time), F7-13 (Accumulative power-on time), and F7-14 (Accumulative power consumption) are cleared.

4: Back up current user parameters
Parameters set by the current user are backed up. Values of all the current function parameters are backed up for restoration after an error caused by parameter adjustment occurs.

501: Restore user backup parameters
Restore parameters backed up by setting FP-01 to 4.

### 5.5 Motor Control Modes

| Parameter | Description | Scenario |
| :--- | :--- | :--- |
|  | F0-01 = 0: SVC | It indicates the SVC mode. It is applicable for common high- <br> performance control scenarios in which one AC drive can <br> drive only one motor, for example, machine tool, centrifuge, <br> drawing machine, and injection molding machine. |
| F0-01: Motor <br> control <br> mode | F0-01 = 1: FVC | It indicates the FVC mode. The motor must be equipped <br> with an encoder and the AC drive must be equipped with a <br> PG card in the same type of the encoder. It is applicable to <br> scenarios requiring high precision speed or torque control. <br> One AC drive can drive only one motor, for example, high- <br> speed papermaking machine, crane, and elevator. |
|  | F0-01 = 2: V/F <br> control | It is applicable to scenarios having no requirement on load <br> (fans and pumps) or using one drive to drive multiple motors. |

### 5.6 Auto-tuning

You can obtain parameters of a controlled motor through motor auto-tuning. Motor auto-tuning methods include dynamic auto-tuning, static auto-tuning 1 , and static auto-tuning 2. You can enter the motor parameters manually.

| Auto-tuning Method | Application | Result |
| :--- | :--- | :--- |
| Dynamic no-load <br> auto-tuning <br> F1-37 = 2 | It is applied to applications where motors can be disconnected <br> from the load. | Best |
| Dynamic auto- <br> tuning with load <br> F1-37 = 2 | It is applied to applications where motors cannot be disconnected <br> from the load. The load friction force is small and the motor is <br> appropriately idle when running at a constant speed. The effect is <br> better with a smaller friction force. | Better |
| Static auto-tuning 1 <br> F1-37 =1 | It is applied to applications where motors cannot be disconnected <br> from the load and dynamic auto-tuning is not allowed. | Good |
| Static auto-tuning 2 2 <br> F1-37 = 3 | It is applied to applications where motors cannot be disconnected <br> from the load and dynamic auto-tuning is not allowed. This mode <br> is recommended for static auto-tuning. It lengthens the auto-tuning <br> time compared to static auto-tuning 1. | Better |
| Manual parameter <br> input | It is applied to applications where motors cannot be disconnected <br> from the load. Copy parameters of motors of the same model which <br> have been auto-tuned to F1-00 (Motor type selection) to F1-10 (No- <br> load current). | Better |

Auto-tuning methods are described below.
Motor 1 is used to describe motor auto-tuning methods. If you need to perform autotuning on motor 2, set F0-24 (Motor parameter group selection) to 1 (Motor parameter group 2).

Step 1: If the motor can be disconnected from the load, cut off the power, and disconnect the motor from the load to have the motor run without load.

Step 2: Power on the AC drive. Set F0-02 (Running command selection) to 0 (Serial communication) to select the operating panel as the running command.

Step 3: Input motor nameplate parameters (F1-00 to F1-05) correctly. Set the following parameters according to the motor:

| Motor | Parameter |
| :--- | :--- |
| Motor 1 | F1-00: Motor type selection <br>  <br>  <br>  <br>  <br> F1-02: Rated motor voltage <br> F1-01: Rated motor power <br> F1-04: Rated motor frequency <br> M1-05: Rated motor speed |
| Motor 2 | A2-00 (Motor type selection) to A2-05 (Rated motor speed) have the same definition. |

If there is an encoder, set F1-27 (Encoder pulses per revolution), F1-28 (Encoder type), and F1-30 (A/B phase sequence of ABZ incremental encoder).

Step 4: For an asynchronous motor, set F1-37 (Auto-tuning selection) (A2-37 in case of Motor 2) to 2 (Asynchronous motor dynamic auto-tuning) and press ENTER. "TUNE" is displayed, as shown in the following figure:

Press RUN on the operating panel. The AC drive drives the motor to accelerate/ decelerate and run in forward/reverse direction. The RUN indicator becomes ON and auto-tuning lasts for about 2 minutes. After the preceding display disappears and the operating panel returns to normal parameter display state, auto-tuning is completed.

After auto-tuning, the following motor parameters are calculated:

| Motor | Parameter |
| :--- | :--- |
| Motor 1 | F1-06: Stator resistance F1-07: Rotor resistance <br> F1-08: Leakage inductive reactance <br>  <br>  <br> F1-10: No-load current |
| Motor 2 | A2-06 to A2-10 have the same definition. |

If the motor cannot be disconnected from the load, set F1-37 (A2-37 in case of Motor 2) to 3 (Asynchronous motor complete static auto-tuning) and press RUN on the operating panel. Auto-tuning starts.

## 6 Troubleshooting and Solutions

### 6.1 Fault Codes and Solutions

Troubleshoot the faults occurred during operating the AC drive as follows.

| Fault Code | Fault Name | Possible Cause | Solution |
| :---: | :---: | :---: | :---: |
| Err02 | Overcurrent during acceleration | A grounding fault or short circuit exists in the output circuit. | Check whether short-circuit occurs on the motor, motor cable, or contactor. |
|  |  | The control mode is SVC or FVC but motor auto-tuning is not performed. | Set motor parameters according to the motor nameplate and perform motor auto-tuning. |
|  |  | The acceleration time is too short. | Increase the acceleration time. |
|  |  | The overcurrent stall prevention parameters are set improperly. | Ensure that current limit is enabled (F3-19 = 1). <br> The setting of $\mathrm{F3}$-18 (Current limit level) is too large. Adjust it between $120 \%$ and $150 \%$. The setting of F3-20 (Current limit gain) is too small. Adjust it between 20 and 40 . |
|  |  | Customized torque boost or V/ F curve is not appropriate. | Adjust the customized torque boost or V/F curve. |
|  |  | The motor is started while spinning. | Enable the catching a spinning motor function or start the motor after it stops spinning. |
|  |  | The AC drive suffers external interference. | View historical fault records. If the current value is far from the overcurrent level, find the interference source. If an external interference does not exist, the drive board or Hall element may be faulty. |

| Fault Code | Fault Name | Possible Cause | Solution |
| :---: | :---: | :---: | :---: |
| Err03 | Overcurrent during deceleration | A grounding fault or short circuit exists in the output circuit. | Check whether short-circuit occurs on the motor, motor cable, or contactor. |
|  |  | The control mode is SVC or FVC but motor auto-tuning is not performed. | Set the motor parameters according to the motor nameplate and perform motor autotuning. |
|  |  | The deceleration time is too short. | Increase the deceleration time. |
|  |  | The overcurrent stall prevention parameters are set improperly. | Ensure that current limit is enabled (F3-19 = 1). <br> The setting of F3-18 (Current limit level) is too large. Adjust it between $120 \%$ and $150 \%$. The setting of F3-20 (Current limit gain) is too small. Adjust it between 20 and 40 . |
|  |  | The braking unit and braking resistor are not installed. | Install the braking unit and braking resistor. |
|  |  | The AC drive suffers external interference. | View historical fault records. If the current value is far from the overcurrent level, find the interference source. If an external interference does not exist, the drive board or Hall element may be faulty. |
| Err04 | Overcurrent at constant speed | A grounding fault or short circuit exists in the output circuit. | Check whether short-circuit occurs on the motor, motor cable, or contactor. |
|  |  | The control mode is SVC or FVC but motor auto-tuning is not performed. | Set motor parameters according to the motor nameplate and perform motor auto-tuning. |
|  |  | The overcurrent stall prevention parameters are set improperly. | Ensure that current limit is enabled (F3-19 = 1). <br> The setting of F3-18 (Current limit level) is too large. Adjust it between $120 \%$ and $150 \%$. The setting of F3-20 (Current limit gain) is too small. Adjust it between 20 and 40 . |
|  |  | The AC drive power class is small. | If the output current exceeds the rated motor current or rated output current of the AC drive during stable running, use an AC drive of larger power class. |
|  |  | The AC drive suffers external interference. | View historical fault records. If the current value is far from the overcurrent level, find the interference source. If an external interference does not exist, the drive board or Hall element may be faulty. |

| Fault Code | Fault Name | Possible Cause | Solution |
| :---: | :---: | :---: | :---: |
| Err05 | Overvoltage during acceleration | The input voltage is too high. | Adjust the input voltage to the normal range. |
|  |  | An external force drives the motor during acceleration. | Cancel the external force or install a braking resistor. |
|  |  | The overvoltage stall prevention parameters are set improperly. | Ensure that the voltage limit function is enabled (F3-23 = 1). <br> The setting of F3-22 (Voltage limit) is too large. Adjust it between 700 V and 770 V . The setting of F3-24 (Frequency gain for voltage limit) is too small. Adjust it between 30 and 50 . |
|  |  | The braking unit and braking resistor are not installed. | Install the braking unit and braking resistor. |
|  |  | The acceleration time is too short. | Increase the acceleration time. |
| Err06 | Overvoltage during deceleration | The overvoltage stall prevention parameters are set improperly. | Ensure that the voltage limit function is enabled (F3-23 = 1). <br> The setting of F3-22 (Voltage limit) is too large. Adjust it between 700 V and 770 V . The setting of F3-24 (Frequency gain for voltage limit) is too small. Adjust it between 30 and 50 . |
|  |  | An external force drives the motor during deceleration. | Cancel the external force or install a braking resistor. |
|  |  | The deceleration time is too short. | Increase the deceleration time. |
|  |  | The braking unit and braking resistor are not installed. | Install the braking unit and braking resistor. |
| Err07 | Overvoltage at constant speed | The overvoltage stall prevention parameters are set improperly. | Ensure that the voltage limit function is enabled (F3-23 = 1). <br> The setting of F3-22 (Voltage limit) is too large. Adjust it between 700 V and 770 V . The setting of F3-24 (Frequency gain for voltage limit) is too small. Adjust it between 30 and 50 . <br> The setting of F3-26 (Frequency rise threshold during voltage limit) is too small. Adjust it between 5 Hz and 20 Hz . |
|  |  | An external force drives the motor during acceleration. | Cancel the external force or install a braking resistor. |
| Err08 | Pre-charge power fault | The bus voltage fluctuates around the undervoltage threshold continuously. | Contact the agent or Inovance. |

| Fault Code | Fault Name | Possible Cause | Solution |
| :---: | :---: | :---: | :---: |
| Err09 | Undervoltage | An instantaneous power failure occurs. | Enable the power dip ride through function (F9-59 $\neq 0$ ). |
|  |  | The AC drive's input voltage is not within the permissible range. | Adjust the voltage to the normal range. |
|  |  | The bus voltage is abnormal. | Contact the agent or Inovance. |
|  |  | The rectifier bridge, pre-charge resistor, drive board, or control board are abnormal. | Contact the agent or Inovance. |
| Err10 | AC drive overload | The load is too heavy or locked-rotor occurs on the motor. | Reduce the load or check motor and mechanical conditions. |
|  |  | The AC drive power class is small. | Replace an AC drive of larger power class. |
| Err11 | Motor overload | F9-01 (Motor overload protection gain) is set improperly. | Set F9-01 (Motor overload protection gain) correctly. |
|  |  | The load is too heavy or locked-rotor occurs on the motor. | Reduce the load or check motor and mechanical conditions. |
| Err12 | Input phase loss | Input phase loss occurs. | Eliminate faults in external circuits. |
|  |  | The drive board, lightning protection board, main control board, or rectifier bridge is abnormal. | Contact the agent or Inovance. |
| Err13 | Output phase loss | The motor is faulty. | Check and ensure that the motor is free of open circuit. |
|  |  | The cable connecting the AC drive and the motor is abnormal. | Eliminate external faults. |
|  |  | The AC drive's three-phase outputs are unbalanced when the motor is running. | Check whether the motor three-phase winding is normal. |
|  |  | The drive board or the IGBT is abnormal. | Contact the agent or Inovance. |
| Err14 | IGBT overheat | The ambient temperature is too high. | Lower the ambient temperature. |
|  |  | The ventilation is clogged. | Clean the ventilation. |
|  |  | The fan is damaged. | Replace the cooling fan. |
|  |  | The thermistor of IGBT is damaged. | Replace the thermistor. |
|  |  | The IGBT is damaged. | Replace the IGBT. |

| Fault Code | Fault Name | Possible Cause | Solution |
| :---: | :---: | :---: | :---: |
| Err15 | External fault | An external fault signal is input using the DI. | Eliminate external faults, and confirm that the mechanical condition allows restart (F818) and reset the operation. |
|  |  | An external fault signal is input using virtual $\mathrm{I} / \mathrm{O}$. | Confirm that the virtual I/O parameters in group A1 are set correctly and reset the operation. |
| Err16 | Communication fault | The host controller is in abnormal state. | Check the cable of the host controller. |
|  |  | The communication cable is abnormal. | Check the communication cables. |
|  |  | The serial port communication protocol (F0-28) of the extension communication card is set improperly. | Set F0-28 (Serial port communication protocol) for the extension communication card correctly. |
|  |  | Communication parameters in group Fd are set improperly. | Set communication parameters in group Fd properly. |
|  |  | If the fault still exists after all the preceding checkings are done, restore the default settings. |  |
| Err17 | Contactor fault | The drive board and power supply are abnormal. | Replace the drive board or power supply board. |
|  |  | The contactor is abnormal. | Replace the contactor. |
|  |  | The lightning protection board is abnormal. | Replace the lightning protection board. |
| Err18 | Current detection fault | The Hall element is abnormal. | Replace the Hall element. |
|  |  | The drive board is abnormal. | Replace the drive board. |
| Err19 | Motor autotuning fault | Motor parameters are not set according to the nameplate. | Set motor parameters correctly according to the nameplate. |
|  |  | Motor auto-tuning times out. | Check whether the AC drive and motor are connected correctly. |
|  |  | The encoder is abnormal. | Check whether F1-27 (Encoder pulses per revolution) is set correctly. Check whether signal lines of the encoder are connected correctly and securely. |
| Err20 | Encoder fault | The encoder is not matched. | Set the encoder type correctly. |
|  |  | The encoder wiring is incorrect. | Check the PG card power supply and phase sequence. |
|  |  | The encoder is damaged. | Replace the encoder. |
|  |  | The PG card is abnormal. | Replace the PG card. |
| Err21 | EEPROM readwrite fault | The EEPROM chip is damaged. | Replace the main control board. |
| Err23 | Short circuit to ground | The motor is short-circuited to the ground. | Replace the cable or motor. |

| Fault Code | Fault Name | Possible Cause | Solution |
| :---: | :---: | :---: | :---: |
| Err26 | Accumulative running time reached | The accumulative running time reached the set value. | Clear the record by parameter initialization. |
| Err27 | User-defined fault 1 | The signal of user-defined fault 1 is input through the multifunctional terminal DI. | Perform the reset operation. |
|  |  | The signal of user-defined fault 1 is input through the virtual I/ 0. | Perform the reset operation. |
| Err28 | User-defined fault 2 | The signal of user-defined fault 2 is input through the multifunctional terminal DI. | Perform the reset operation. |
|  |  | The signal of user-defined fault 2 is input through the virtual I/ 0. | Perform the reset operation. |
| Err29 | Accumulative power-on time reached | The accumulative power-on time reached the set value. | Clear the record by parameter initialization. |
| Err30 | Load loss | The operation current of the AC drive is smaller than F9-64 (Load loss detection level). | Check whether the load is disconnected or ensure that F9-64 (Load loss detection level) and F9-65 (Load loss detection time) are set based on the actual conditions. |
| Err31 | PID Feedback loss | PID feedback is smaller than FA-26 (Detection level of PID feedback loss). | Check the PID feedback signal or set FA26 (Detection level of PID feedback loss) correctly. |
| Err40 | Pulse-by-pulse current limit fault | The load is too heavy or locked-rotor occurs on the motor. | Reduce the load or check motor and mechanical conditions. |
|  |  | The AC drive power class is small. | Replace an AC drive of larger power class. |
| Err41 | Motor switchover fault during running | Motor switchover is performed using a terminal during running of the AC drive. | Perform motor switchover after the AC drive stops. |
| Err42 | Speed error | Encoder parameters are set improperly. | Set encoder parameters properly. |
|  |  | Motor auto-tuning is not performed. | Perform motor auto-tuning. |
|  |  | F9-69 (Detection level of speed error) and F9-70 (Detection time of speed error) are set incorrectly. | Set F9-69 (Detection level of speed error) and F9-70 (Detection time of speed error) correctly based on actual condition. |

| Fault <br> Code | Fault Name |  | Possible Cause |
| :--- | :--- | :--- | :--- | Solution | Err43 |
| :--- |
| Motor overspeed |

### 6.2 Common Symptoms and Solutions

| No. | Fault Symptom | Possible Cause | Solution |
| :---: | :---: | :--- | :--- |
| 1 | There is no power supply to the AC <br> drive or the power input to the AC <br> drive is too low. | Check the power supply. |  |
|  | Check the bus voltage. |  |  |
|  | Re-connect the 8-pin wire and 40-pin <br> wire. |  |  |
| The pre-charge resistor of the AC <br> drive is damaged. |  |  |  |
| The control board or the operating <br> panel is faulty. | Contact the agent or Inovance. |  |  |
| The rectifier bridge is damaged. |  |  |  |

| No. | Fault Symptom | Possible Cause | Solution |
| :--- | :--- | :--- | :--- |
| 2 | $\begin{array}{ll}\text { "HC" is displayed } \\ \text { upon power-on. }\end{array}$ | $\begin{array}{l}\text { Cable connection between the drive } \\ \text { board and control board is in poor } \\ \text { contact. }\end{array}$ | $\begin{array}{l}\text { Re-connect the 8-pin wire and 28-pin } \\ \text { welated components on the control } \\ \text { board are damaged. }\end{array}$ |
|  | $\begin{array}{l}\text { The motor or motor cable is short- } \\ \text { circuited to ground. }\end{array}$ | Contact the agent or Inovance. |  |$\}$

| No. | Fault Symptom | Possible Cause | Solution |
| :---: | :---: | :---: | :---: |
| 7 | DI terminals are disabled. | The related parameters are set incorrectly. | Check and reset the parameters in group F4 again. |
|  |  | The external signal is incorrect. | Re-connect the external signal cable. |
|  |  | The jumper across OP and +24 V becomes loose. | Re-confirm the jumper bar across OP and +24 V . |
|  |  | The control board is faulty. | Contact the agent or Inovance. |
| 8 | The motor speed does not rise in FVC control. | The encoder is faulty. | Replace the encoder and re-confirm cable connection. |
|  |  | The encoder connection is incorrect or in poor contact. | Replace the PG card. |
|  |  | The PG card is faulty. |  |
|  |  | The drive board is faulty. |  |
| 9 | The AC drive detects overcurrent and overvoltage frequently. | The motor parameters in group F1 are set improperly. | Set the motor parameters in group F1 or perform motor auto-tuning again. |
|  |  | The acceleration/deceleration time is improper. | Set proper acceleration/deceleration time. |
|  |  | The load fluctuates. | Contact the agent or Inovance. |
| 10 | "Err17" is detected upon power-on or running. | The pre-charge contactor is not closed. | Check whether the contactor cable is loose. <br> Check whether the contactor is faulty. <br> Check whether 24 V power supply of the contactor is faulty. <br> Contact the agent or Inovance. |
| 11 | The brake torque of the motor is insufficient when the motor is in the deceleration or decelerate to stop state. | The encoder disconnection or overvoltage stall protection takes effect. | Check the encoder wiring at FVC (FO-01 $=1$ ). <br> If the braking resistor has been configured, set F3-23 (Voltage limit selection) to 0 (Disabled). |

## 7 Maintenance

### 7.1 Routine Maintenance

Check the following items daily to ensure normal running and prevent damage to the AC drive. Copy this checklist and sign the "Checked" column after each inspection.

| Inspection Item | Inspection Points | Solutions | Checked |
| :---: | :---: | :---: | :---: |
| Motor | Inspect whether the abnormal sounds and vibration occur on the motor. | - Check whether the mechanical connection is normal. <br> - Check whether output phase loss occurs on the motor. <br> - Check whether retaining screws of the motor are tightened. |  |
| Fan | Inspect whether the cooling fan of the AC drive and motor work abnormally. | - Check running of the cooling fan of the AC drive. <br> - Check whether the cooling fan of the motor is normal. <br> - Check whether the ventilation is clogged. <br> - Check whether the ambient temperature is within the permissible range. |  |
| Installation environment | Inspect whether the cabinet and cable duct are abnormal. | Check input and output cables for damaged insulation. <br> Check for vibration of hanging bracket. <br> Check whether ground bars and terminals become loose or get corroded. |  |
| Load | Inspect whether the running current of the AC drive exceeds the rated current of the AC drive and motor for a certain period. | Check whether motor parameters are set properly. <br> Check whether the motor is overloaded. <br> Check whether the mechanical vibration is severe (allowed range: < 1 g). |  |
| Input voltage | Inspect whether the power voltage of the main and control circuits is within the allowed range. | Check that the input voltage is within the allowed range. <br> Check whether start of heavy load exists. |  |

### 7.2 Periodic Inspection

| Inspection Item | Inspection Point | Solution | Checked |
| :---: | :---: | :---: | :---: |
| General | Inspect for wastes, dirt, and dust on the surface of the AC drive. | Check whether the cabinet of the AC drive is powered off. Use a vacuum cleaner to suck up wastes and dust to prevent direct touching. <br> - Wipe stubborn stains with alcohol and wait until the alcohol evaporates. |  |
| Cables | Inspect power cables and connections for discoloration. Inspect wiring insulation for aging or wear. | - Replace cracked cables. <br> - Replace damaged terminals. |  |
| Peripheral devices such as relay and contactor | Check whether the contactor is loose or abnormal noise exists during operation. Check whether short-circuit, water stain, expansion, or cracking occurs on peripheral devices. | - Replace abnormal peripheral devices. |  |
| Ventilation | Inspect whether ventilation and heatsink are clogged. <br> Check whether the fan is damaged. | - Clean the ventilation. <br> - Replace the fan. |  |
| Control circuit | Inspect for control components in poor contact. <br> Inspect for loose terminal screws. Inspect for control cables with cracked insulation. | Clear away foreign matters on the surface of control cables and terminals. <br> Replace damaged or corroded control cables. |  |

### 7.3 Replacement of Wear Parts

### 7.3.1 Service Life of Wear Parts

The service life of fans and electrolytic DC bus capacitors is related to the operating environment and maintenance status. The general service life is listed as follows.

| Component | Service Life ${ }^{[1]}$ |
| :--- | :---: |
| Fan | $\geqslant 5$ years |
| Electrolytic capacitor | $\geqslant 5$ years |

[1] You can determine when to replace these parts according to the actual operating time.

- Ambient temperature: $40^{\circ} \mathrm{C}$

■ Load rate: $80 \%$

- Operating rate: 24 hours per day

### 7.3.2 Replacing Cooling Fans

1) Possible damage causes: bearing worn and blade aging
2) Judging criteria: whether there is crack on the blade; whether there is abnormal vibration noise upon startup; whether the blade runs abnormally
3) Replacement notes:

- To remove the cooling fan, decompress the fan cover hook and pull the cover out.
- After replacing the fan, check that the air flow direction is upright.

Removing the Fan [MD500T45G(B) to MD500T160G and MD500-2T22G(B) to MD500-2T55G]

(2) Remove the four screws from the fan cover using a screwdriver.
(3) Remove the fan and fan cover from the AC drive.

Installing the Fan [MD500T45G(B) to MD500T160G and MD500-2T22G(B) to MD500-2T55G]
(1) Install the fan in a reverse procedure to removal. Pay attention to the direction of the fan.
(2) Install the fan and fan cover on the AC drive. Note that the mounting holes are aligned, as shown in figure 3 of the removal procedure.
(3) After the replacement is completed, check that the air flow direction is upright.

## Removing the Fan (MD500T200G to MD500T450G)

(1) Remove the six screws on the cover. Then, hold the cover with both hands and lift it up in the arrow direction shown below to remove the cover.

(2) Disconnect the fan power cable connectors from the AC drive. Each fan has a power cable connector.
(3) Remove screws from the fan box and draw the fan box out in the arrow direction.

| (4) Loosen screws from |
| :--- |
| each fan cover and remove | the fan.

Installing the Fan (MD500T200G to MD500T450G)
(1) Install the fan in a reverse procedure to removal. Pay attention to the direction of the fan.
(2) Align the fan box to the rail and push it into the AC drive.
(3) Connect the fan power cable connectors before fixing the fan box. After the replacement is completed, check that the air flow direction is upright.

### 7.4 Storage

For storage of the AC drive, pay attention to the following three aspects:

1) Pack the AC drive with the original packing box provided by Inovance.
2) Do not expose the AC drive to moisture, high temperature or outdoor direct sunlight for a long time.
3) The electrolytic capacitor will deteriorate after being stored for a long time. Therefore, the AC drive must be switched on once every 6 months, each time lasting at least 5 hours. Ensure to increase the input voltage gradually to the rated value by using a voltage regulator. Contact professionals for technical support if necessary.

## Appendix A Parameter Table

$i z$ : It is possible to modify the parameter with the AC drive in the Stop and in the Run status.
$\star$ : It is not possible to modify the parameter with the AC drive in the Run status.

- : The parameter is the actual measured value and cannot be modified.
*: The parameter is a factory parameter and can be set only by the manufacturer.

## A. 1 Standard Parameter Table

| No. | Param. Name | Setting Range |  | Default | Change |
| :---: | :---: | :---: | :---: | :---: | :---: |

## A. 2 Monitoring Parameters

| No. | Param. Name Minimum Unit | Communication <br> Address |  |
| :---: | :--- | :--- | :---: |
| Group U0: Monitoring Parameters |  |  |  |
| U0-00 | Running frequency | 0.01 Hz | 7000 H |
| U0-01 | Frequency reference | 0.01 Hz | 7001 H |
| U0-02 | Bus voltage | 0.1 V | 7002 H |
| U0-03 | Output voltage | 1 V | 7003 H |
| U0-04 | Output current | 0.01 A | 7004 H |
| U0-05 | Output power | 0.1 kW | 7005 H |
| U0-06 | Output torque | $0.1 \%$ | 7006 H |
| U0-07 | DI state | 1 | 7007 H |
| U0-08 | DO state | 1 | 7008 H |
| U0-09 | Al1 voltage | 0.01 V | 7009 H |
| U0-10 | Al2 voltage (V)/current (mA) | $0.01 \mathrm{~V} / 0.01 \mathrm{~mA}$ | 700 AH |
| U0-11 | Al3 voltage | 0.01 V | 700 BH |
| U0-12 | Count value | 1 | 700 CH |
| U0-13 | Length value | 1 | 700 DH |
| U0-14 | Load speed | $1 \mathrm{rpm} / \mathrm{min}$ | 700 EH |
| U0-15 | PID reference | 1 | 700 FH |
| U0-16 | PID feedback | 1 | 7010 H |
| U0-17 | PLC stage | 1 | 7011 H |
| U0-18 | Pulse reference | 0.01 kHz | 7012 H |
| U0-19 | Feedback speed | 0.01 Hz | 7013 H |
| U0-20 | Remaining running time | 0.1 min | 7014 H |
| U0-21 | Al1 voltage before correction | 0.001 V | 7015 H |
| U0-22 | Al2 voltage <br> Correction $/$ | 7016 H |  |
| U0-23 | Al3 voltage before correction $(m A)$ before | $0.001 \mathrm{~V} / 0.01 \mathrm{~mA}$ | 7017 H |
| U0-24 | Motor speed | 0.001 V | 7018 H |

Appendix A Parameter Table

| No. | Param. Name | Minimum Unit | Communication <br> Address |
| :---: | :---: | :---: | :---: |
| U0-25 | Current power-on time | 1 min | 7019H |
| U0-26 | Current running time | 0.1 min | 701 AH |
| U0-27 | Pulse reference | 1 Hz | 701BH |
| U0-28 | Communication reference | 0.01\% | 701 CH |
| U0-29 | Encoder feedback speed | 0.01 Hz | 701DH |
| U0-30 | Main frequency reference | 0.01 Hz | 701EH |
| U0-31 | Auxiliary frequency reference | 0.01 Hz | 701FH |
| U0-32 | Viewing any register address value | 1 | 7020 H |
| U0-34 | Motor temperature | $1^{\circ} \mathrm{C}$ | 7022 H |
| U0-35 | Target torque | 0.1\% | 7023H |
| U0-36 | Resolver position | 1 | 7024H |
| U0-37 | Power factor angle | $0.1^{\circ}$ | 7025H |
| U0-38 | ABZ position | 1 | 7026H |
| U0-39 | Target voltage upon V/F separation | 1 V | 7027H |
| U0-40 | Output voltage upon V/F separation | 1 V | 7028H |
| U0-41 | DI state display | 1 | 7029 H |
| U0-42 | DO state display | 1 | 702AH |
| U0-43 | DI set for function state display 1 (function 01-40) | 1 | 702BH |
| U0-44 | DI set for function state display 2 (function 41-80) | 1 | 702 CH |
| U0-45 | Fault information | 1 | 702DH |
| U0-58 | Phase Z counting | 1 | 703AH |
| U0-59 | Rated frequency | 0.01\% | 703BH |
| U0-60 | Running frequency | 0.01\% | 703 CH |
| U0-61 | AC drive state | 1 | 703DH |
| U0-62 | Current fault code | 1 | 703EH |
| U0-63 | Sending torque value of point-topoint communication | 0.01\% | 703FH |
| U0-64 | Number of slaves | 1 | 7040 H |
| U0-65 | Torque upper limit | 0.1\% | 7041H |
| U0-66 | Communication extension card type | 100: CANOpen 200: PROFIBUS-DP 300: CANlink | 7042H |
| U0-67 | Communication extension card version | Display range | - |
| U0-68 | AC drive state on DP card | Bit0: AC drive running status <br> Bit1: Running direction <br> Bit2: Whether the AC drive has a fault <br> Bit3: Target frequency reached <br> Bit4 to Bit7: Reserved <br> Bit8 to Bit15: Fault code | 7043H |
| U0-69 | Speed of transmitting DP/0.01 Hz | 0.00 Hz to the maximum frequency | 7044H |
| U0-70 | Motor speed of transmitting DP/ RMP | 0 to rated motor speed | 7045H |
| U0-71 | Communication card current display | Display range | - |
| U0-72 | Communication card faulty state | Display range | - |
| U0-73 | Motor SN | 0 : Motor 1 <br> 1: Motor 2 | 7046H |
| U0-74 | AC drive output torque | 0.1\% | 7047H |

| No. | Param. Name | Minimum Unit | Communication <br> Address |
| :---: | :--- | :--- | :---: |
| U0-76 | Low bits of accumulative power <br> consumption | $0.1^{\circ}$ | 704 CH |
| U0-77 | High bits of accumulative power <br> consumption | $1^{\circ}$ | 704 DH |
| U0-78 | Linear speed | $1 \mathrm{~m} / \mathrm{min}$ | 704 EH |

## INOVANCE Warranty Agreement

1) Inovance provides an 18-month free warranty to the equipment itself from the date of manufacturing for the failure or damage under normal use conditions.
2) Within the warranty period, maintenance will be charged for the damage caused by the following reasons:
a. Improper use or repair/modification without prior permission
b. Fire, flood, abnormal voltage, natural disasters and secondary disasters
c. Hardware damage caused by dropping or transportation after procurement
d. Operations not following the user instructions
e. Damage out of the equipment (for example, external device factors)
3) The maintenance fee is charged according to the latest Maintenance Price List of Inovance.
4) If there is any problem during the service, contact Inovance's agent or Inovance directly.
5) Inovance reserves the rights for explanation of this agreement.

[^0]:    - The technical data of MD500T18.5G(B)(-T) to MD500T22G(B)(-T) is similar to that of MD500T18.5G(B) to MD500T22G(B).
    NOTE
    - The rated power is measured at 440 VAC input voltage.
